

What do breeders say about our products?

Customer reviews:

“ I recommend Draminski's tester – a detector of the mating period in bitches. Draminski's tester allows for very accurate examination and observation of results over several consecutive days. In my breeding, I only have bitches, so it is crucial to know when I should go for mating. Thanks to this device, I avoid the costs of progesterone tests at the vet and, on top of that, I spare the bitch from having blood drawn, which is certainly not pleasant. Testing with Draminski's tester is very easy and its accuracy is 100% when it comes to determining the mating period.

“ I ordered Dog Ovulation Detector for my griffons. I want to thank a lot for this great instrument. I used it on my bitch Ellinor that had no signs of estrous the day that was indicated as mating moment with your tester. The result – she conceived 5 puppies.
